                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC. The invention discloses isolated colon specific nucleic acids (CSNAs) and CC the polypeptides (CSPAs) that they encode. The colon specific nucleic color and polypeptides are useful as vaccines. The colon specific nucleic color and polypeptides are useful as vaccines. The colon specific nucleic color and polypeptide are also useful for diagnosing and monitoring the presence and metastases of colon cancer in a pattent. The antibody that color specific polypeptide is useful for color specific polypeptide is useful for color specific protein in a sample, as well as for treating a patient with cancer, particularly by inducing an immune color specific acid molecule or polypeptide. In particular, these colon specific colorical acid molecule or polypeptide. In particular, these colon specific colorical acid molecule or polypeptide. In particular, these color specific colorical cancer and proteins are useful for identifying, diagnosing, monitoring, colorical cancer diagnosing and treating colon cancer (e.g. colorectal cancer) and concancerous disease states in the colon. These are also useful in gene color specific polypeptide in a particular and in the production of transgenic animals and cells and in the production of patients of the approach of the sequences color specific polypeptide. The sequences color specific polypeptide is useful in gene color and production of transgenic animals and cells and in the production of patients and patien
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SXX
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                     liver. (I) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipoproteinaemia, hyperlipidaemia and hypercholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                   The invention relates to a single exon nucleic acid probe (SENP) (I) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements) fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult
                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            õ
                                                                                                                                                       The invention relates to a spatially-addressable set of single exon called acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labeled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to encode proteins. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from genomic sequence. The present sequence is a peptide encoded by a single exon nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               04-FEB-2000;

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Penn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful analyzing gene expression in human fetal liver -

                                                                                                                                                                                                                                                                           measuring human gene expression in a sample derived from human heart (see ABA21335-ABA41305). The present sequence is a protein encoded by one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the hubrain. They can be used to measure gene expression in brain cell sa
                                                                                                              30-JAN-2001;

The present invention relates to human single exon nucleic acid probes (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single even minimum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (MOLE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           present invention provides a number of single exon nucleic acid es which are derived from genomic sequences expressed in the human emarrow. They can be used to measure gene expression in bone marrow les, which may enable the improved diagnosis and treatment of cancers as lymphoma, leukaemia and myeloma. The present sequence is a ein encoded by one of the probes of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            present invention

                                                      The present invention relates to single exon nucleic acid prosee AAI31315-AAI57546). The present sequence is a peptide ence such probe. The probes are useful for producing a microarray predicting, measuring and displaying gene expression in sampl from human placenta. The probes are useful for antenatal diaghuman genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                 nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                              The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by on such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to

CC nucleic acid expressed in the human lung; measuring gene expression in a cc sample derived from human lung, comprising (a) contacting the array with a cc sample derived from human lung, comprising (a) contacting the array with cc a collection of detectably labeled nucleic acids derived from human lung comprising (c) mRNA, and (b) measuring the label detectably bound to each probe of cc (a) algorithmically predicting at least one exon from genomic sequences (c) of the eukaryote; and (b) detecting specific hybridisation of detectably clabeled nucleic acids from eukaryote lung mRNA, to a single exon probe, comprising a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several crissues and/or cell types using hybridisation to a single exon of captures and for cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the capression analysis, and for identifying exons in a gene, particularly cusing human lung derived mRNA and for the study of lung diseases (COPD), interstital lung disease (ILD) familial idiopathic pulmonary disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           30-JUN-2000;

The invention relates to a substantially pure polypeptide comprising an amino acid sequence selected from Rv0284, Rv0285, Rv0455c, Rv0455c, Rv19569, Rv19569, Rv1986, Rv3477, Rv3878, Rv3879c or Mr3106.1 (also disclosed are ORF13A and Rv0284ct), or their immunogenic portion, nucleic acids encoding them and an amino acid sequence analogue having at least 70% sequence identity to the polypeptide and is immunogenic. The protein is useful in preparing a pharmaceutical composition for diagnosing tuberculosis and in preparing a vaccine against tuberculosis caused by virulent mycobacteria. The vaccine or immunogenic, pharmaceutical composition can be used prophlactically in a subject not infected with a virulent mycobacterium, or therapeutically in a subject already infected with a virulent mycobacterium. The protein is useful for preventing, treating and detecting infections caused by species of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New Mycobacterium tuberculosis antigens, useful for diagnosing tuberculosis, and as a vaccine for treating or preventing infections caused by species of tuberculosis complex
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 3;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPT; 2002-061970/08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            19-APR-2000; 2000DK-0000666

                                 cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tuberculosis complex (M. tuberculosis, M. bovis, M. africanum). The nucleic acids may be used for effecting in vivo expression of the antigen, and in diagnostic assays for detecting the presence of pathogenic organisms in a sample. The vaccine is an improvement of the living BCG vaccine presently available, where one or more copies of the genome of the microorganism to allow the microorganism to express secrete the polypeptide. Incorporation of more than one copy of a nucleotide sequence enhances the immune response. The present sequence represents an immunogenic peptide derived from an M. tuberculosis protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-FEB-2000; 2000US-0515126

coligonucleotide or polynucleotide sequence specifically hybridiable with coligonucleotide or polynucleotides of the target polynucleotide. CC at least 30 contiguous nucleotides of the target polynucleotide. CC The polypeptides and polynucleotides are useful in diagnosing, cc treating and preventing diseases or conditions associated with the cc decreased expression or overexpression of SECP, such as liver (e.g. hepatitis, cirrhosis), cell prollferative (e.g. cancer, cc atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, cc infarction), immune/inflammatory (e.g. acquired immunodeficiency cc syndrome (AIDS), allergies) and developmental (e.g. Hypothyroidism, cc syndrome) disorders (many other diseases and conditions cc are given in the specification). These are also useful in assessing the cffects of exogenous compounds on the expression of nucleic acid and cc amino acid sequences of SECP. The SECP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polypeptides, or in altering the expression of the target compounds that specifically bind to or modulate the neasuring protein protein interactions, drug-target interactions, and gene expression profiles. The present sequence is a SECP protein of the creating the protein of the protein of the present sequence is a SECP protein of the creating the protein of the present sequence is a SECP protein of the creating the protein of the present sequence is a SECP protein of the creating the protein of the present sequence is a SECP protein of the creating the protein of the protein protein protein protein sequence is a SECP protein of the creating the protein of the present sequence is a SECP protein of the creating the protein prot

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: MATC J. Rubenfield et al.

APPLICANT: MATC J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO F

TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS:

FILE REFERENCE: 107196.136

CURRENT APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR APPLICATION NUMBER: US 60/094,190

PRIOR FILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142

SEQ ID NO 32682

LENGTH: 497

GENERAL INFORMATION:
APPLICANT: NERI, Dario
APPLICANT: TARLI, Lorenzo
APPLICANT: VITI, Francesca
APPLICANT: VITI, Francesca
APPLICANT: BIRCHLER, Manfred
TITLE OF INVENTION: SPECIFIC BINDING MOLECULES FOR SCINTIGRAPHY
FILE REFERENCE: SCH-1733
CURRENT APPLICATION NUMBER: US/09/075,338C
CURRENT FILING DATE: 1998-05-11
NUMBER OF SEQ ID NOS: 34
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 3
LENGTH: 6
TYPE: PRT
ORGANISM: Artificial Sequence
FEATURE:
OTHER INFORMATION: Description of Artificial Sequence: anti-ED-B
OTHER INFORMATION: antibody clone
